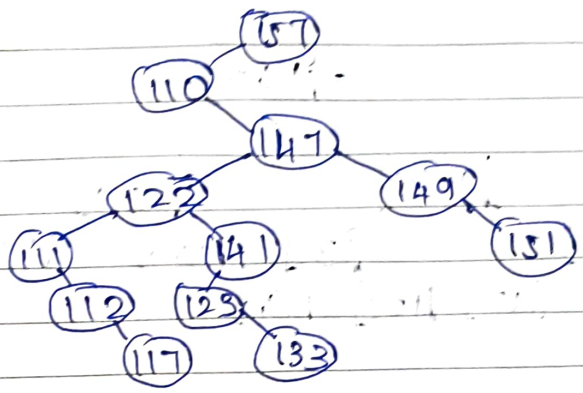
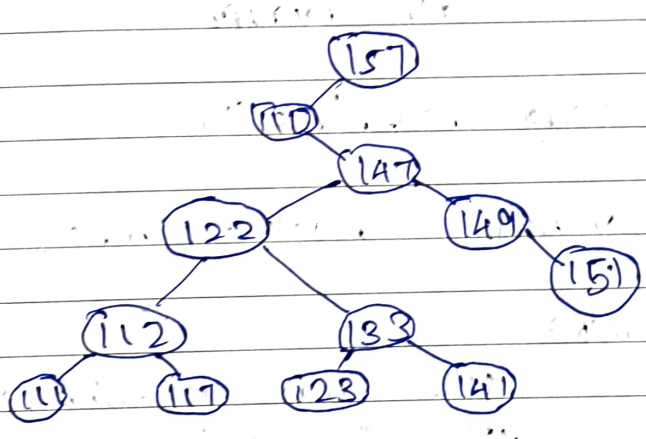
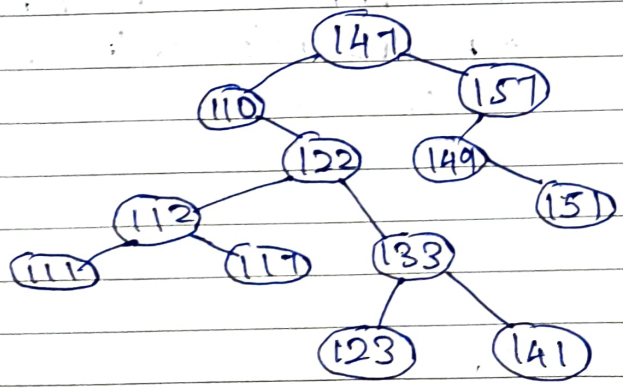
~~Lab~~ ~~Week~~ - WEEK - 5

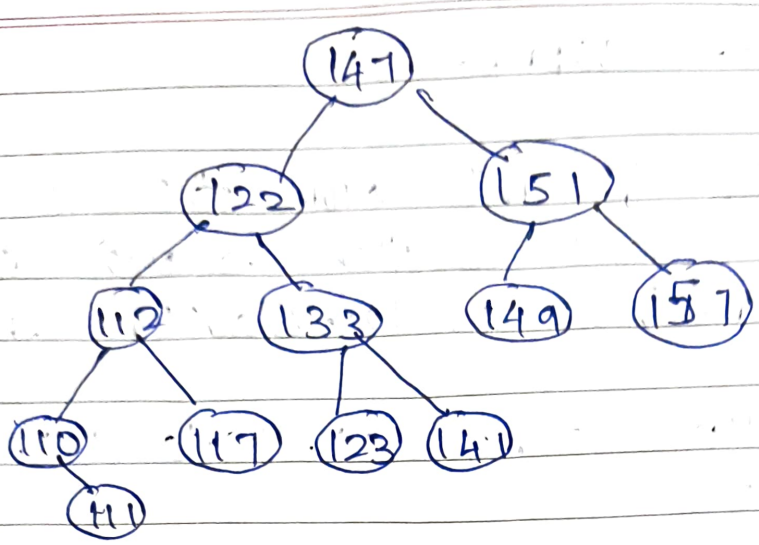
Construct ~~of a~~ BST from the given set of elements and then balance it using AVL rotations and Red-Black Tree implementation

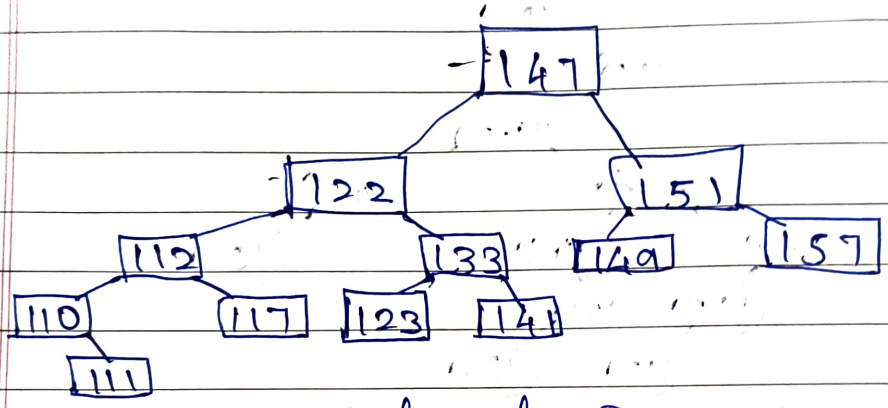
157, 110, 147, 122, 111, 149, 151, 141, 123, 112, 117, 133











Balanced BST using AVL Rotations.

By using Red-Black Tree

Red - [value] , Black - [value]

Constraints :

* The nodes are either RED or BLACK
* The root node is always BLACK
* All NULL nodes are BLACK
* A RED node can't have RED child/parent.

Step 1:

Step 2:
